

# Salt Bromine Hot Tub Maintenance Checklist

## Start-Up

- Bring a water sample to your **Dazzle™** Retailer for water balance recommendations.
- While hot tub is filling, add initial dose (375 ml per 1,000 L) of **Dazzle™ Stain & Scale 1** to cold water. Once full, start pump, operate with the aeration off and commence heating.
- Balance water according to your **Dazzle™** Retailer's recommendations.
- Allow water to circulate for 2 hours.
- Add initial application of bromide salt solution to establish the bank (approx. 8 L per 1,500 L).
- Set Salt Bromine control unit to desired setting (consult your retailer for more information). Use **Dazzle™ Bromine Granules** (½ cap per 1,000 L) to establish the initial bromine level in the water. After adding, wait 20 minutes, test and repeat if level is not between 3.0 – 5.0 ppm.
- Apply **Dazzle™ Amaze** per label directions (2 caps per 1,000 L). Ensure that the pump and filter are operating and leave the cover off for a minimum of one hour after application. Allow water to circulate for at least 15 minutes before proceeding to next step.
- Add initial dose of **Dazzle™ Botanical Cleanse** (3 caps per 1,000 L). Pour around the edges of the hot tub with the pump operating and the aeration off. Avoid adding **Dazzle™ Botanical Cleanse** when the sanitizer level is above 5 ppm.
- Add initial dosage of **Dazzle™ Performance Plus** (200 g per 1,000 L). Apply through the skimmer or in front of the suction plate with the pump in operation and the aeration off.
- Add initial dosage of **Dazzle™ Nature Sheen** (20 ml per 1,000 L). Apply with the pump in operation and the aeration off. Run filter continuously until water clears. **Dazzle™ Nature Sheen** will agglomerate particulate into masses large enough to be filtered out. Watch filter closely and clean as required.

## As Required

- Test sanitizer and pH level with **Dazzle™ Test Strips**. Use **Dazzle™ Bromine Granules** to boost the bromine level should it fall below 3.0 ppm. Always maintain the reading between 3.0 – 5.0 ppm.  
The pH level should be maintained at 7.4 - 7.6.

# Salt Bromine Hot Tub Maintenance Checklist

## Weekly

- Add regular weekly dosage of **Dazzle™ Stain & Scale 2** (1 cap per 1,000 L) to protect against metal staining and scale formation. Apply directly to water with pump operating and aeration off.
- Oxidize water with **Dazzle™ Amaze** (2 caps per 1,000 L) by broadcasting over water surface. Note: heavy bather load may require more frequent applications. Allow water to circulate for at least 15 minutes and leave the cover off for minimum 1 hour. Wait 15 minutes before moving to next step.
- Digest and remove organics with **Dazzle™ Botanical Cleanse** (3 caps per 1,000 L). Add directly to water with pump operating and aeration off.
- Add weekly dosage of:
  - Dazzle™ Performance Plus** (6½ caps per 1,000 L).
  - Dazzle™ Nature Sheen** (½ cap per 1,000 L).
- Brush, skim and vacuum. Remove filter cartridge and rinse with water from garden hose.
- Clean water line with **Dazzle™ Tub Cleanse**, if necessary.

## Monthly

- Have water tested at your **Dazzle™ Retailer**. Adjust pH, total alkalinity, calcium hardness as required.
- Test sodium bromide level using appropriate test strip and adjust accordingly to maintain level of approximately 2,300 ppm.
- Clean cartridge with **Dazzle™ Filter Cleanse** as per label directions.

## Draining

- Clean entire hot tub including plumbing lines with **Dazzle™ Drain Prep**. Add as per label directions the day before draining.
- Drain hot tub and clean surfaces with **Dazzle™ Tub Cleanse**.
- Clean cartridge with **Dazzle™ Filter Cleanse** as per label directions.
- Clean cover with **Dazzle™ Cover Cleanse & Protect** as per label directions.
